

Liver Support

A mother's memoirs.

We at **Sabell Corporation** are happy to partner with our friends at Ecotrend. In the last newsletter we filled you in on our relationship with Dr. Cabanillas, now we would like to share more on how we decided to get behind **Isula A4+**.

It all started with an eight-week-old baby boy.

In 1988, Jarad had open heart surgery for which he never completely recovered from, and after seven years of pain and trauma, his persistent mother discovered her son was one of many who had contracted tainted blood infected with Hepatitis C.

During those seven years Jarad's mom, after being told there was nothing wrong with her son, was forced to become a researcher, nutritionist, legal advocate, activist, and an educator.

By the age of twelve, Jarad had attended only a handful of days at school between kindergarten and the fifth grade. In June 2000, his health hit an all-time low. Sick for weeks, his weight had plummeted to just forty-one pounds. Jarad spent most of his days sleeping and was too weak to walk. "Why eat? Every time I eat, I just throw-up," said Jarad. To stop the vomiting, he simply stopped eating. He was surviving on sips of ginger-ale. The family was fast losing hope as his death seemed imminent.

By this time, his mother had scoured the internet looking for a cure. Finally, she received news that a doctor from Peru who happened to be associated with a Canadian company, had a natural herbal formula that treated Hepatitis C.

She learned it was not available or approved for use in Canada so she contacted Dr. Cabanillas in Peru and asked if her young son could try his herbal product. After much discussion, Dr. Cabanillas finally agreed to send a sample of the product for her son's personal use only.

Miraculously, within days the liver tonic began to transform his life. Jarad was able to eat again, then walk, then run, then ride his bike, skateboard, rollerblade, and climb trees.

Miraculously, within days the liver tonic began to transform his life. Jarad was able to eat again, then walk, then run, then ride his bike, skateboard, rollerblade, and climb trees.

More importantly, Jarad was well enough to finally become an active member of the family and enjoy friendships with children his own age.

By September 2000, for the first time in Jarad's life, and less than three months after his first dose, Jarad enrolled in public school and attended regular classes on a full-time basis. Word spread about Jarad's turn of events and as a result interviews were sought and given.

Jarad continued to take the herbal product for four years while the Canadian company sought approval from Health Canada, and after twelve years **Isula A4+** was approved in July 2012.

Today, Jarad enjoys marvelous health. He continues to take the herbal product whenever he feels his liver needs help. Winters, you will find Jarad taking on the rails and hills on his snowboard at Whistler Mountain! Leslie, his mother, remains an activist and is still helping people with Hepatitis C around the world.
